Public land access is foundational to America’s hunting and fishing traditions. It ensures that outdoor opportunities exist for all of us, regardless of our income, connections, or property ownership.

But in Minnesota and Wisconsin, sportsmen and women are largely losing out on more than 300,000 acres of public land where there is no permanent, legal access.*

These local, state, and federal public lands are surrounded by private land with no public roads or trails to reach them. Landlocked parcels range in size from just a few acres to nearly 4,000 acres and—although they are, as a general rule, legally open to public hunting and fishing—guarantee access to no one except the neighboring landowners and those with permission to cross private lands.

Today, when time in the outdoors is more valuable than ever, unlocking public lands represents one of the most obvious and actionable ways to provide more opportunities for more people to enjoy the woods and waters of our country.

*State walk-in access programs offer a valuable and widely celebrated tool for opening smaller and isolated parcels of landlocked lands to which it would be difficult or impractical to do so by any other means. Because most access agreements require perpetual renewal, however, they are not permanent—enrolled properties can change hands and/or drop out of a program—and thus were not factored into this analysis.

THE UPPER MIDWEST’S LANDLOCKED PUBLIC LANDS

Untapped Hunting and Fishing Opportunities in Minnesota and Wisconsin

A New Collaborative Analysis by onX and TRCP
Landlocked by History

As with other states in the West and Midwest, upon statehood the land base in Minnesota and Wisconsin was organized into six-by-six-mile squares known as townships. Each township was further divided into 36 individual one-mile-square (640-acre) sections.

Both states received land grants from the federal government, originally comprised of two sections within each township, which were to be used to support public schools. Following statehood, several subsequent conveyances of federal land were provided to Minnesota and Wisconsin to serve various purposes, such as to support additional state institutions, create state parks and forests, expand agriculture, and retire marginal or unproductive farmland during the Great Depression. Meanwhile, millions of acres reverted back to counties and the states due in part to tax forfeiture.

Later, the Department of Natural Resources in each state began actively purchasing lands to meet management needs, generate revenue, protect vital fish and wildlife habitats, and provide access for sportsmen and women.

There were also vast federal public lands set aside in the Northwoods in the early 20th century, including the Chippewa and Superior National Forests in Minnesota and the Chequamegon-Nicolet National Forest in Wisconsin.

The result today is some of the most diverse public land holdings found anywhere in the nation and, unfortunately, a remnant patchwork of landlocked public lands.

Public Lands in the Upper Midwest

In the media and in popular imagination, public lands are most closely associated with Western unscorched peaks managed by the U.S. Forest Service and National Park Service or vast expanses of sagebrush prairie managed by the Bureau of Land Management. To be sure, there’s a good reason for this: 92 percent of our 640 million acres of federally managed lands are located in the 12 Pacific Coast and Intermountain West states, including Alaska.

But there are public hunting and fishing opportunities in every U.S. state that play a critical role in our ability to recruit, retain, and reactivate license-buying sportsmen and women.

Places like the Superior National Forest in Minnesota or the Chequamegon-Nicolet National Forest in Wisconsin are some of the most diverse public land holdings found anywhere in the nation and, unfortunately, a remnant patchwork of landlocked public lands.

The result today is some of the most diverse public land holdings found anywhere in the nation and, unfortunately, a remnant patchwork of landlocked public lands.

Later, the Department of Natural Resources conducted a survey of all parcels of unconsolidated public land and found nearly one thousand yards of shoreline, 471 acres of wetlands, and 284 acres of public land.

These two adjoining pieces of public land in central Minnesota total more than 600 acres of public land.

As with other states in the West and Midwest, upon statehood the land base in Minnesota and Wisconsin was organized into six-by-six-mile squares known as townships. Each township was further divided into 36 individual one-mile-square (640-acre) sections.

In Minnesota and Wisconsin, 20 percent of the land base is public, compared to 12 percent national average.

A lifelong passion for hunting or fishing—whether we are a parent or a child—will undoubtedly mean the difference between someone for turkeys, or work as a winemaker for gin, access to an overlooked public parcel could be a game-changer. And easy access to a lake shore or riverbank might give a parent the only place where they’ll be able to teach their kids to fish for walleye, pike, or smallmouth bass.

A lifelong passion for hunting or fishing—and the conservation funding raised by those license purchases—could hang in the balance.

Strategically unlocking as little as a few dozen inaccessible acres at a time could mean the difference between someone having a place to explore the outdoors and not. A lifelong passion for hunting or fishing—and the conservation funding raised by those license purchases—could hang in the balance.

Landlocked by History

As with other states in the West and Midwest, upon statehood the land base in Minnesota and Wisconsin was organized into six-by-six-mile squares known as townships. Each township was further divided into 36 individual one-mile-square (640-acre) sections.

Both states received land grants from the federal government, originally comprised of two sections within each township, which were to be used to support public schools. Following statehood, several subsequent cessions of federal land were provided to Minnesota and Wisconsin to serve various purposes, such as to support additional state institutions, create state parks and forests, expand agriculture, and retire marginal or unproductive farmland during the Great Depression. Meanwhile, millions of acres reverted back to counties and the states due in part to tax forfeiture.

There were also vast federal public lands set aside in the Northwoods in the early 20th century, including the Chippewa and Superior National Forests in Minnesota and the Chequamegon-Nicolet National Forest in Wisconsin.

The result today is some of the most diverse public land holdings found anywhere in the nation and, unfortunately, a remnant patchwork of landlocked public lands.

Solutions

Landlocked public lands are best made accessible through cooperative agreements with private landowners. If a small project is to be undertaken, the critical work cannot be undertaken without funding. When 20 percent of the land base is public, small projects can offer big benefits. Here are four programs that support these efforts.

Land and Water Conservation Fund

Since 1965, LWCF has conserved the most powerful tool available for establishing and expanding access to public lands. With the recent passage of the Great American Outdoors Act, LWCF is dedicated to public access. Importantly, the Act has just increased LWCF’s property, at least 40 percent of the program must be used for state-driven projects.

Both Minnesota and Wisconsin have innovative state programs for conserving habitat and improving access to their state’s valuable public lands for other states looking to do the same.

Minnesota

Lesser Stem Outdoor Heritage Fund

This program supplemented LWCF, focusing projects that protect, enhance, or restore habitat and lands that create those primary goals. It also can be used to open or expand access to inaccessible state wildlife management areas.

Strategic Land Asset Management Program

Since 2014, this program ensures that the state’s public land resource base reflects Minnesota’s conservation, recreation, and economic values and needs. Part of the program makes proposed land acquisitions and among its projects is to improve access to public lands.

Wisconsin

Knowles-Nelson Stewardship Program

From 2010 to 2014, the program acquired more than 12,400 acres of valuable natural areas and wildlife habitat, improved water quality and fisheries, and increased opportunities for outdoor recreation. With a budget of $350 million in 2015, Knowles-Nelson allows the DNR, among other things, unlock Wisconsin’s state parks, wildlife and forest areas, and state natural areas. Knowles-Nelson is set to expire in 2022 and will need to be renewed by the state legislature.
Public land access is foundational to America’s hunting and fishing traditions. It ensures that outdoor opportunities exist for all of us, regardless of our income, connections, or property ownership.

But in Minnesota and Wisconsin, sportsmen and women are largely losing out on more than 300,000 acres of public land where there is no permanent, legal access.* These local, state, and federal public lands are surrounded by private land with no public roads or trails to reach them. Landlocked parcels range in size from just a few acres to nearly 4,000 acres and—although they are, as a general rule, legally open to public hunting and fishing—guarantee access to no one except the neighboring landowners and those with permission to cross private lands.

Today, when time in the outdoors is more valuable than ever, unlocking public lands represents one of the most obvious and actionable ways to provide more opportunities for more people to enjoy the woods and waters of our country.

* State walk-in access programs offer a valuable and widely celebrated tool for opening smaller and isolated parcels of landlocked lands to which it would be difficult or impractical to do so by any other means. Because most access agreements require perpetual renewal, however, they are not permanent—enrolled properties can change hands and/or drop out of a program—and thus were not factored into this analysis.
